Sameer Shahzad

Web Application Penetration Tester || LLM Engineer || Full Stack Web Developer || xIntern @DevelopersHub Co. & @Nexium
Lahore, Punjab, Pakistan

Summary

I am Sameer Shahzad, a Full Stack Developer with a strong specialization in Web Application Penetration Testing and secure software development. My expertise spans modern front-end technologies like React, Next.js, and TypeScript, along with powerful back-end frameworks such as Django, Django REST Framework (DRF), and FastAPI. However, my core focus lies in identifying, analyzing, and mitigating security vulnerabilities in web applications. I have a deep understanding of the OWASP Top 10 and actively apply this knowledge to assess and secure applications against common threats such as injection attacks, broken authentication, insecure deserialization, and cross-site scripting (XSS). My approach combines development and security, allowing me to think like both a builder and an attacker — ensuring that the systems I work on are not only functional but also resilient against real-world threats. I am passionate about continuously improving my skills in ethical hacking, penetration testing, and secure coding practices. I actively explore new tools, techniques, and frameworks to stay ahead in the evolving landscape of cybersecurity and modern web development. Driven by a security-first mindset, I aim to deliver applications that are not just user-friendly and efficient, but also robust, reliable, and protected against vulnerabilities. I am always open to challenging opportunities where I can apply my expertise in both development and security to create impactful and secure digital solutions.

Cyber Security Intern!

November 2025 - December 2025 (2 months)

Punjab, Pakistan

This project demonstrates a comprehensive approach to securing a User Management System, moving from basic vulnerability assessments to advanced threat detection and mitigation. Initially, I identified critical flaws like XSS and SQL Injection using OWASP ZAP and manual testing. To secure the application, I implemented robust backend defenses including Bcrypt password hashing, JWT-based authentication, and strict input validation.

As the project progressed into advanced security phases, I integrated real-time monitoring using Fail2Ban and implemented API hardening with rate-limiting and secure CORS configurations. A major focus was placed on ethical hacking, where I used SQLMap to simulate attacks and subsequently patched vulnerabilities using prepared statements and CSRF protection. The final phase involved extensive security audits with Nikto and Lynis to ensure compliance with OWASP Top 10 best practices. The result is a fully hardened, audit-ready application protected against modern cyber threats.

Nexium

Web Development Intern

July 2025 - August 2025 (2 months)

Lahore

Completed an internship developing full-stack web applications. Key responsibilities included building responsive React.js UIs styled with Tailwind CSS, and architecting robust RESTful APIs using Django and Python. Acquired practical experience integrating secure client-server solutions.

Education

Information Technology University

Software Engineering · (August 2023 - August 2027)

Forman Christian College (A Chartered University), Lahore

Pre-Engineering · (May 2021 - May 2023)

Divisional Public School
